

Il ruolo delle infrastrutture di ricerca nel potenziamento delle attività di R&S in geotermia e scienze ambientali: casi studio di **EGRISE** e **ITINERIS**

Eugenio Trumpy, CNR-IGG

Fora on geothermal energy in EU

- **Supporting, strengthening and optimise** the *fora* on geothermal systems dealing with research and innovation: Deep Geothermal Implementation Working Group (DG-IWG) and ETIP-G
- **Facilitate the realisation** of the DG-IWG Implementation Plan and the **execution** of the ETIP-G Roadmap with an **update** of the **SRIA** and the **Vision**
- Supporting both fora has the objective to **strengthen** the development of new geothermal technologies to uptake the market and reach our climate and energy objectives for 2030 and 2050, in a common agreement of the sector: Industry, Research, and Public authorities.
- Ensuring the DG-IWG and ETIP-G have **enough data, tools and procedures** in place for them to take well-grounded discussions and strategic decisions to move geothermal forward in a productive way

ETIP Geothermal

Research
&
Industry

Motivations

Describe RD&I in the geothermal sector also from a historical perspective

Support the Strategic Research and Innovation Agenda

Highlighting **success** stories and **gaps**

Data organization & Knowledge sharing

Supporting the identification of the most relevant **research priorities**

Provide a framework for data access, retrieve and query

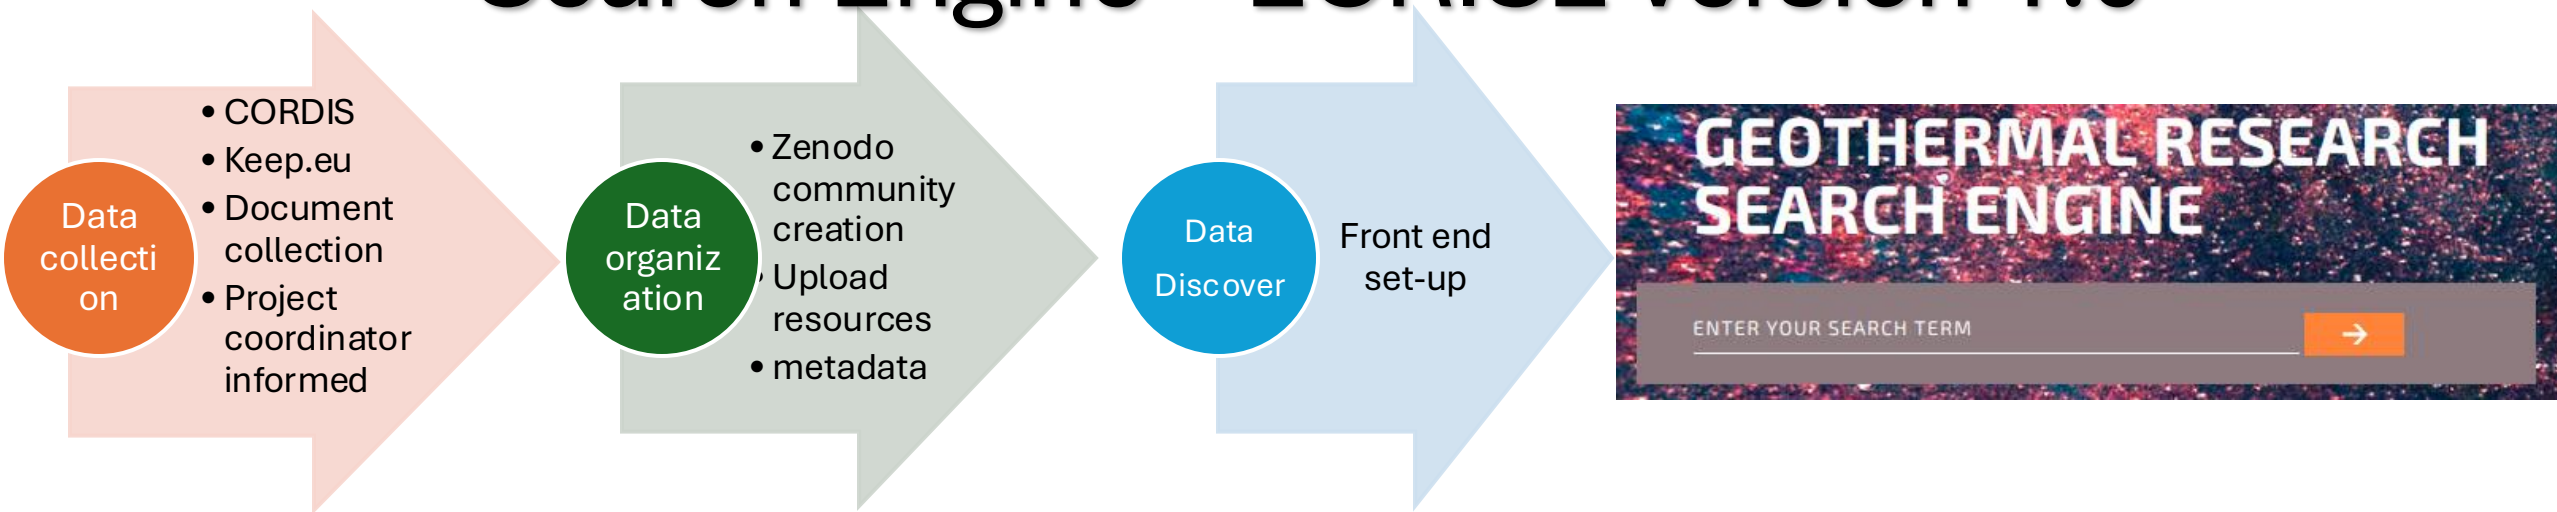

Writing project proposal

Where can we find project results?

The European Geothermal RD&I Documents Search Engine – EGRISE version 1.0

Back-end-front-end connection is guaranteed by the Application Program Interface (**API**) provided by **Zenodo**

The search engine is embedded in the ETIP-G website. It's available for ETIP-G members and for general public.

Total documents: 266 (264 pdf, 2 xls and 1 zip)

Publication: 251 (Deliverable: 198, Report: 33,

Article: 8, Conference paper: 7, Book: 2,

Other: 3)

What's new in EGRISE vs 2.0

- EGRISE vs 1.0 is expanded using as backend the constantly updated **OpenAIRE** aggregation
- The updated version of EGRISE vs 2.0 will benefit by the constantly updated **OpenAIRE** infrastructure
- CNR signed a **MoU** with **OpenAIRE** to setup **OpenAIRE CONNECT** and **OpenAIRE MONITOR**
- Define a strategy for the sustainability of these services beyond the duration of the GEOTHERMFORA and OpenAIRE Nexus projects

EGRISE version 2.0 Set-up

Tool to build a Gateway for **Geothermal** community:

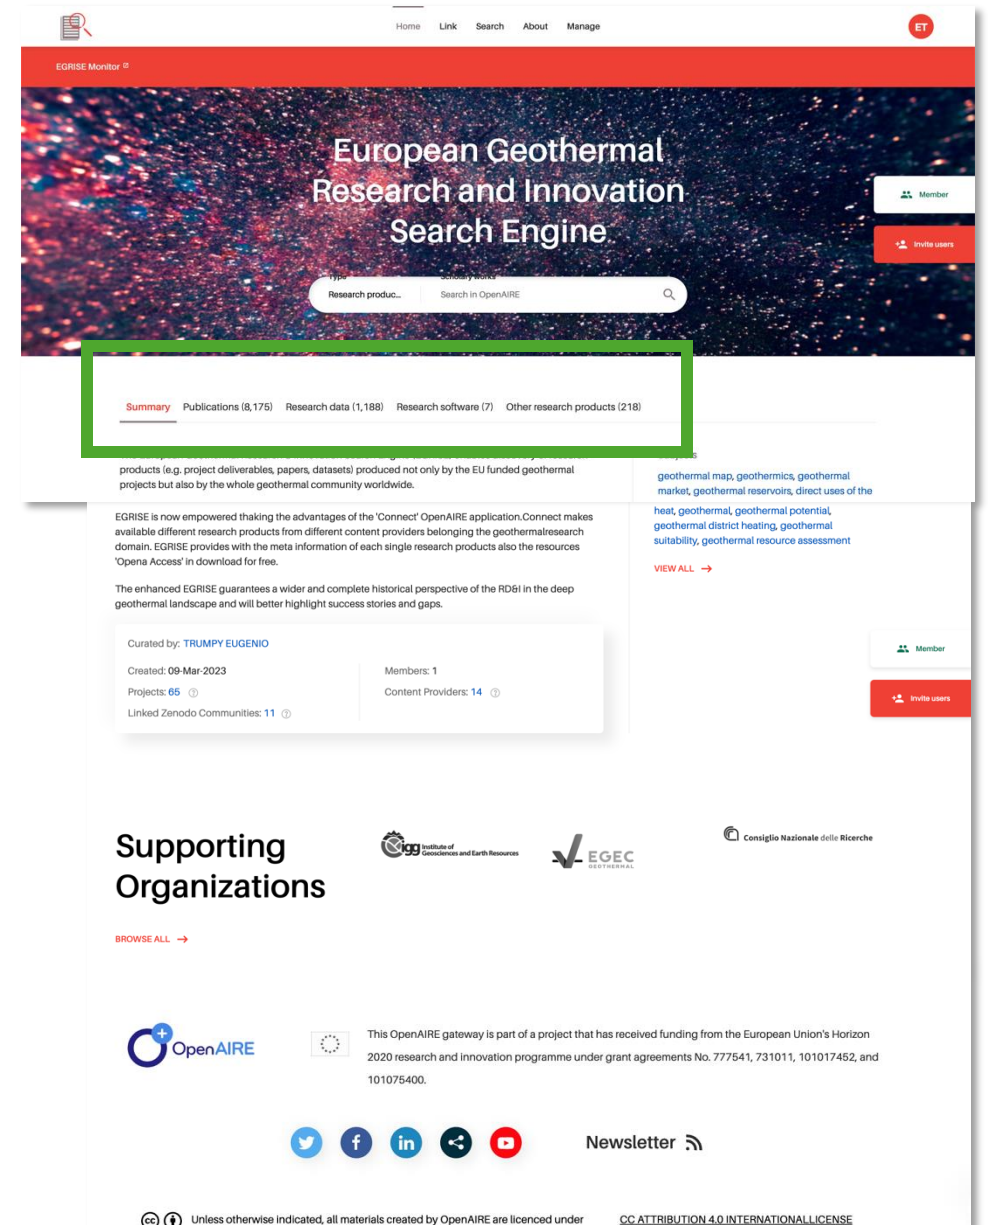

- Turn Open Science into practice
- It takes our open and linked research products
- It is a service customised to our need

What we need:

- **Set** the repository for the research products
- **Link** the research product to our community (e.g., in Deep Geothermal in Zenodo), funding and other research products
- **Custom** the portal interface

Repositories:

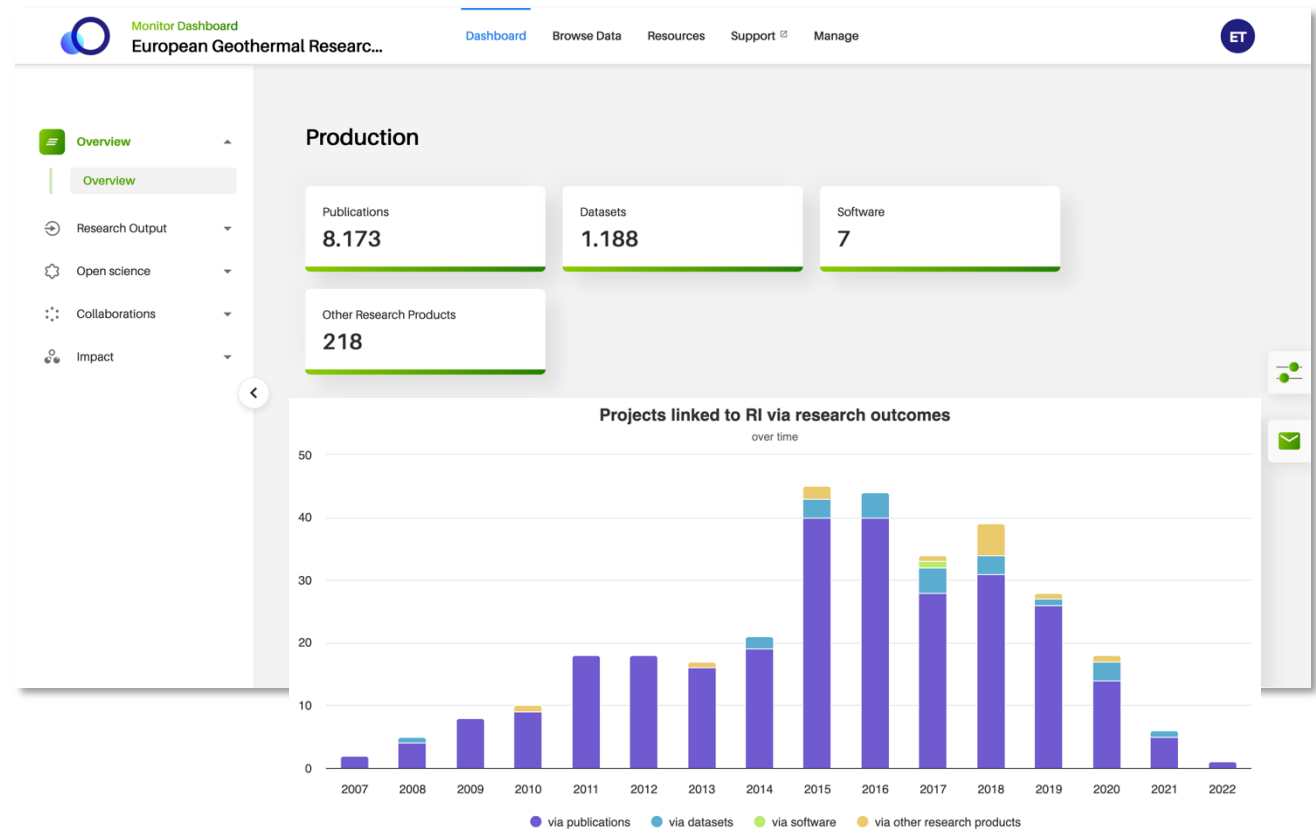

- Publication repos (OPENAIRE, OA Elsevier, ..)
- Project (OpenAIRE, Participant portal, ...)
- Data repos (Pangea, ...)

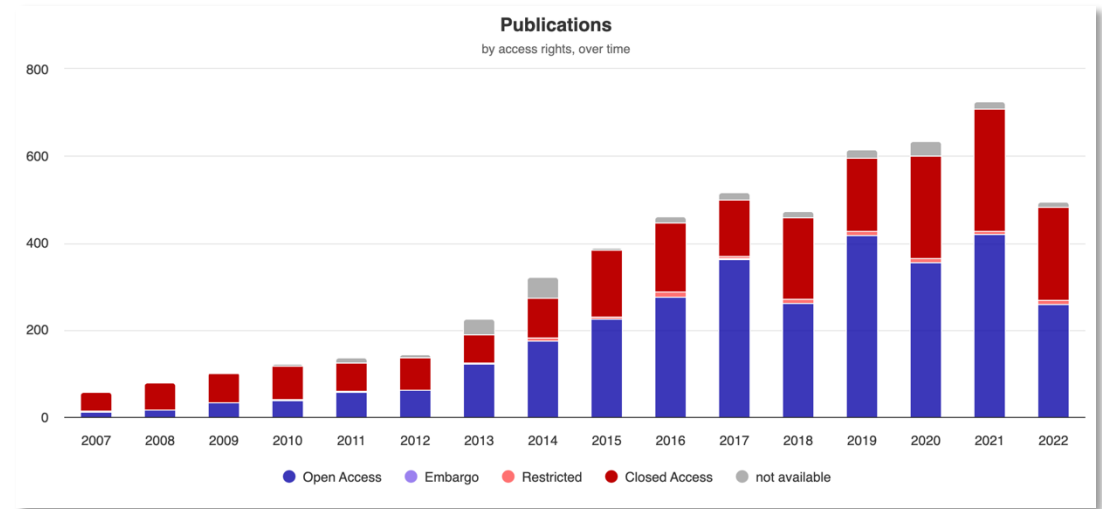

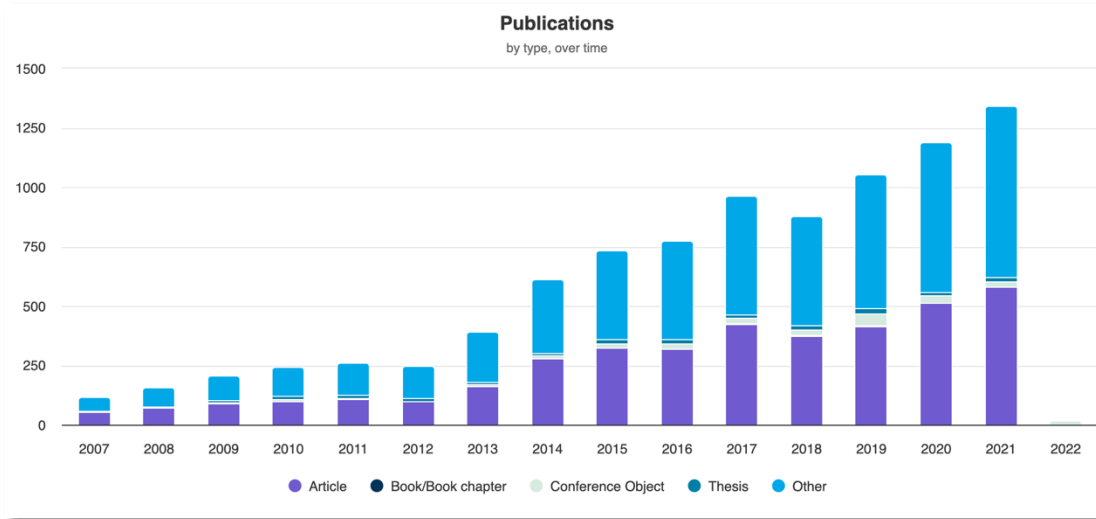

Tool to monitor research in **Geothermal**:

- Discover, track and understand trends and impact pathways, connections, collaborations for Geothermal (optimize the future)
- Make informed decisions
- Identify research pathways across key dimensions
- Discover (Open Science) research costs and trends
- See what works and what not
- Reveal hidden potential

EGRISE version 2.0

Virtual Research Environments and cross-disciplinary activities

- **Scopo:**
 - *costruire l'Hub Italiano per l'accesso ai dati, ai servizi e alle facilities per lo studio interdisciplinare dei quattro domini ambientali del sistema Terra: atmosfera, idrosfera, biosfera terrestre e geosfera*

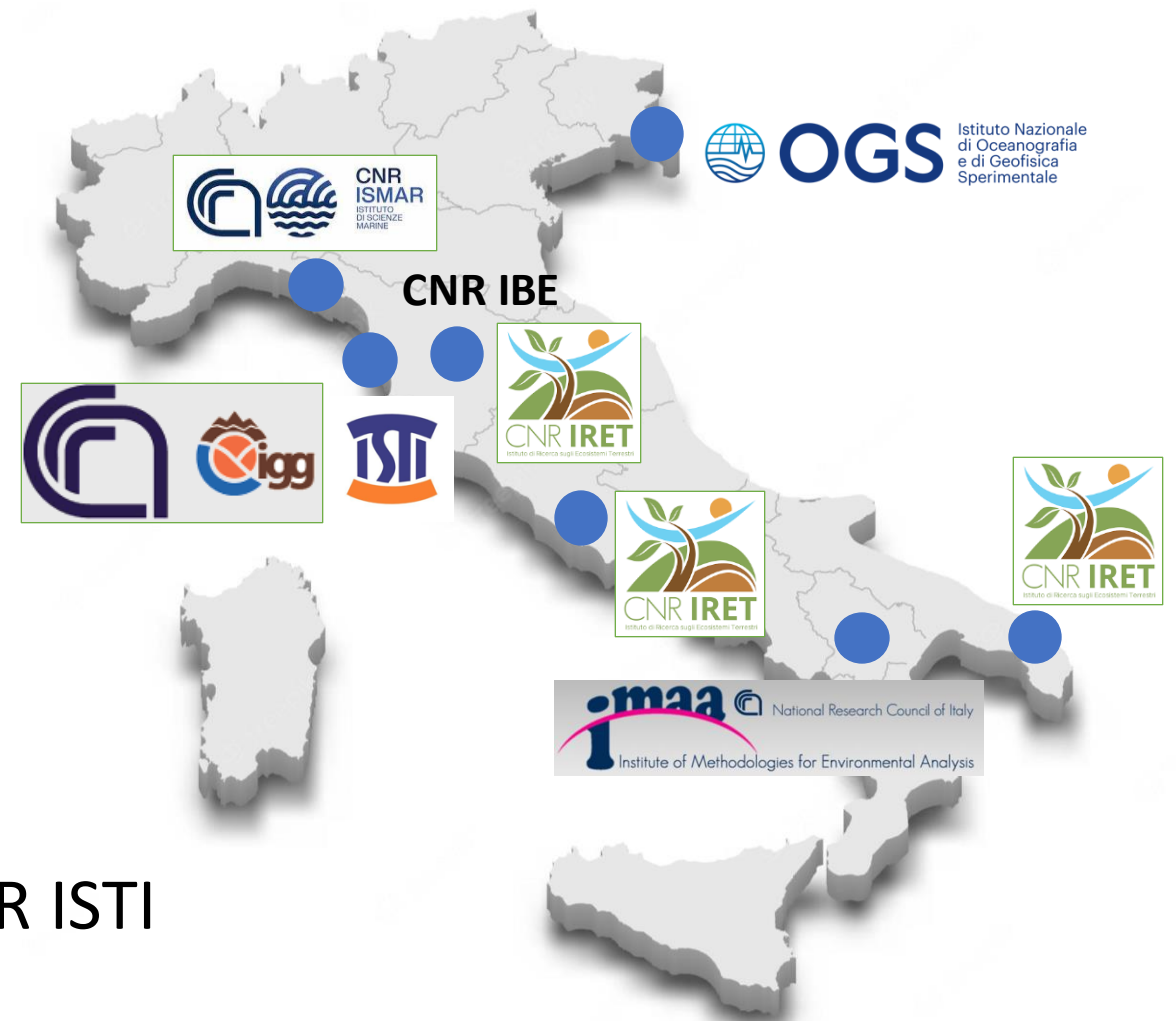

von Humboldt and Bonpland,
Naturgemälde

Main participating infrastructures

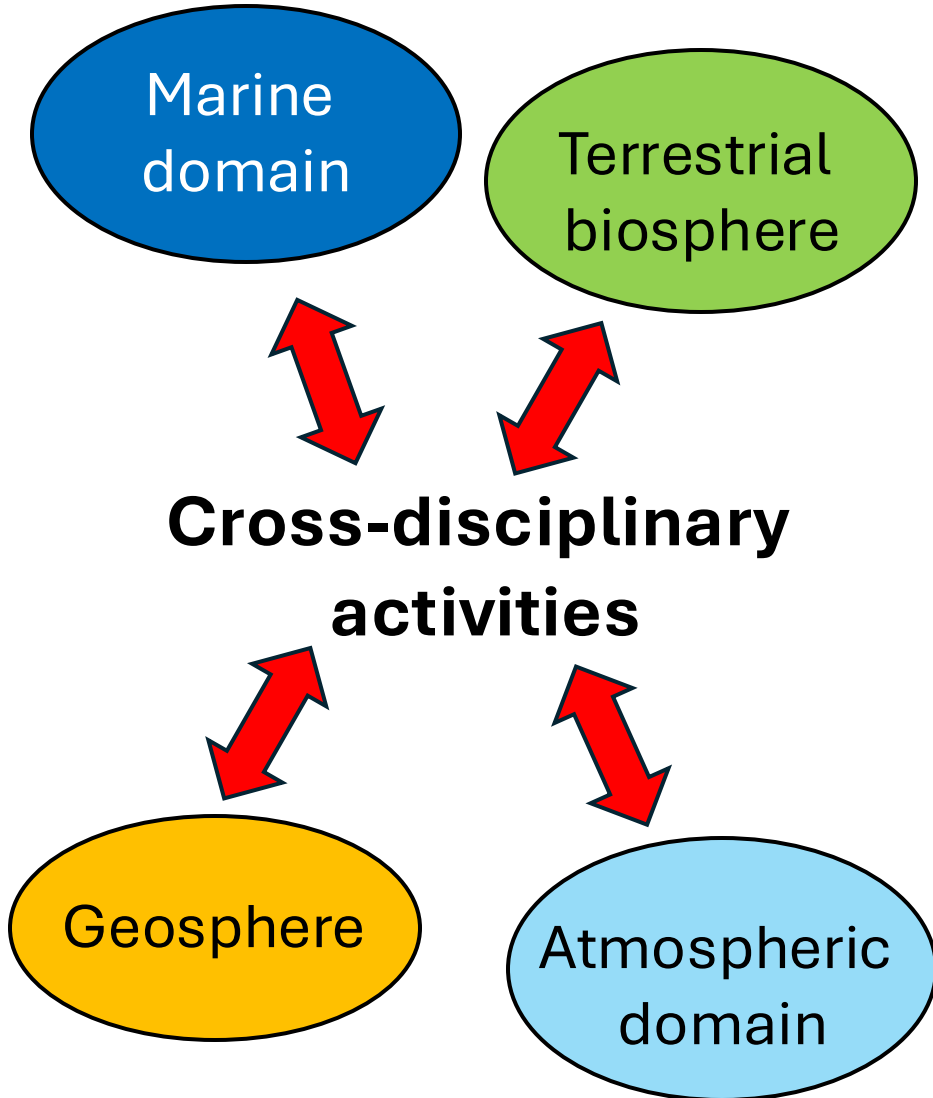

Main participating institutions

- CNR-IGG
 - CNR-IRET-FI
 - CNR-IRET-LE
 - CNR-IRET-Montelibretti
 - CNR-IBE-FI
 - CNR-IMAA
 - CNR-ISMAR-Lerici
 - OGS-OCE Trieste
- supporto tecnico-modellistico di CNR ISTI

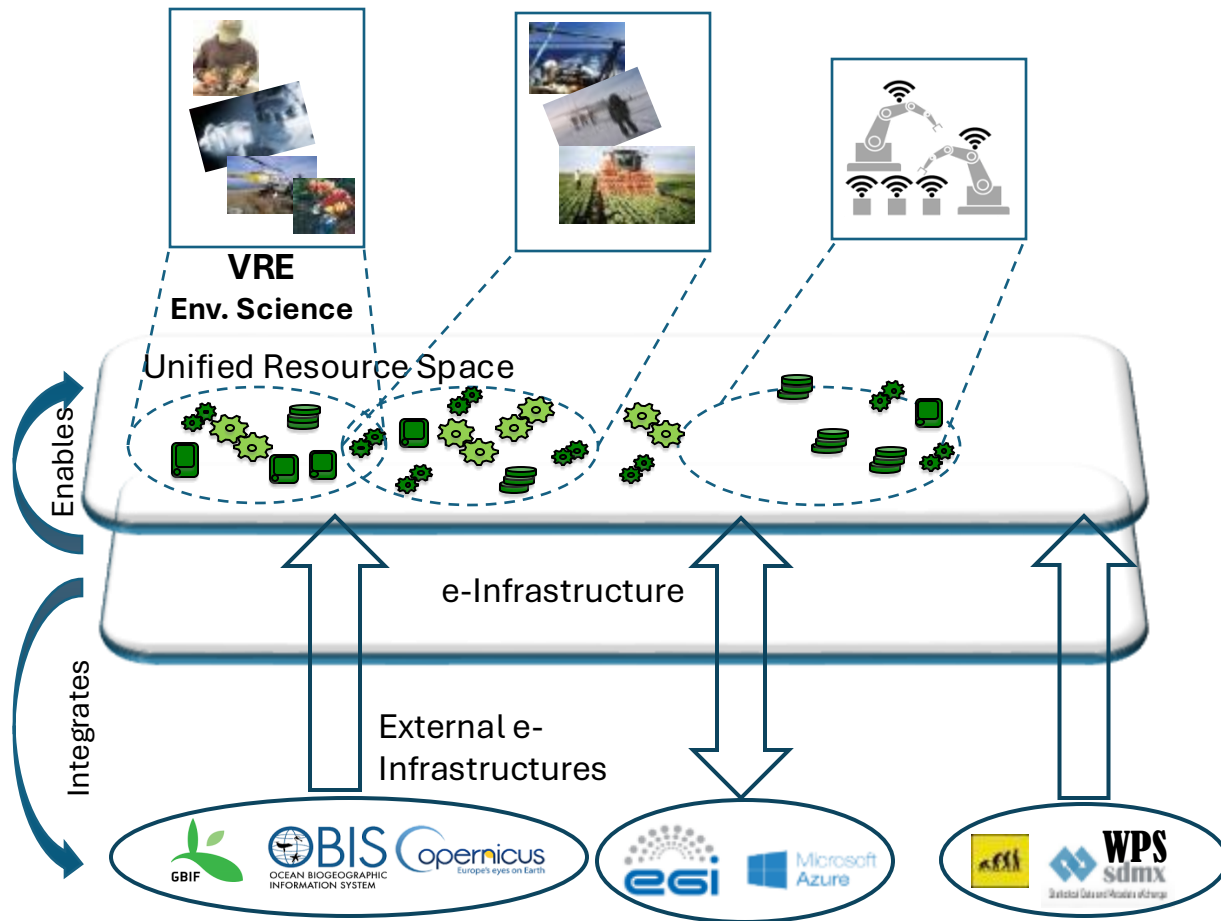

Main project goals

The activities of WP8 use data, information and knowledge generated by the individual RI to create a **system of Virtual Research Environments (VRE)**, and provide **services** where RIs from different domains are harmonized to deal with **scientifically and societally relevant topics**.

This **systemic approach** will support the Italian role in several RIs and help taking a leading role to address complex, multi-disciplinary challenges.

The D4Science e-Infrastructure

A **network** of hardware and software resources (*databases, processes, services, machines, AI models*) that **supports collaborative** and **data-intensive** Science:

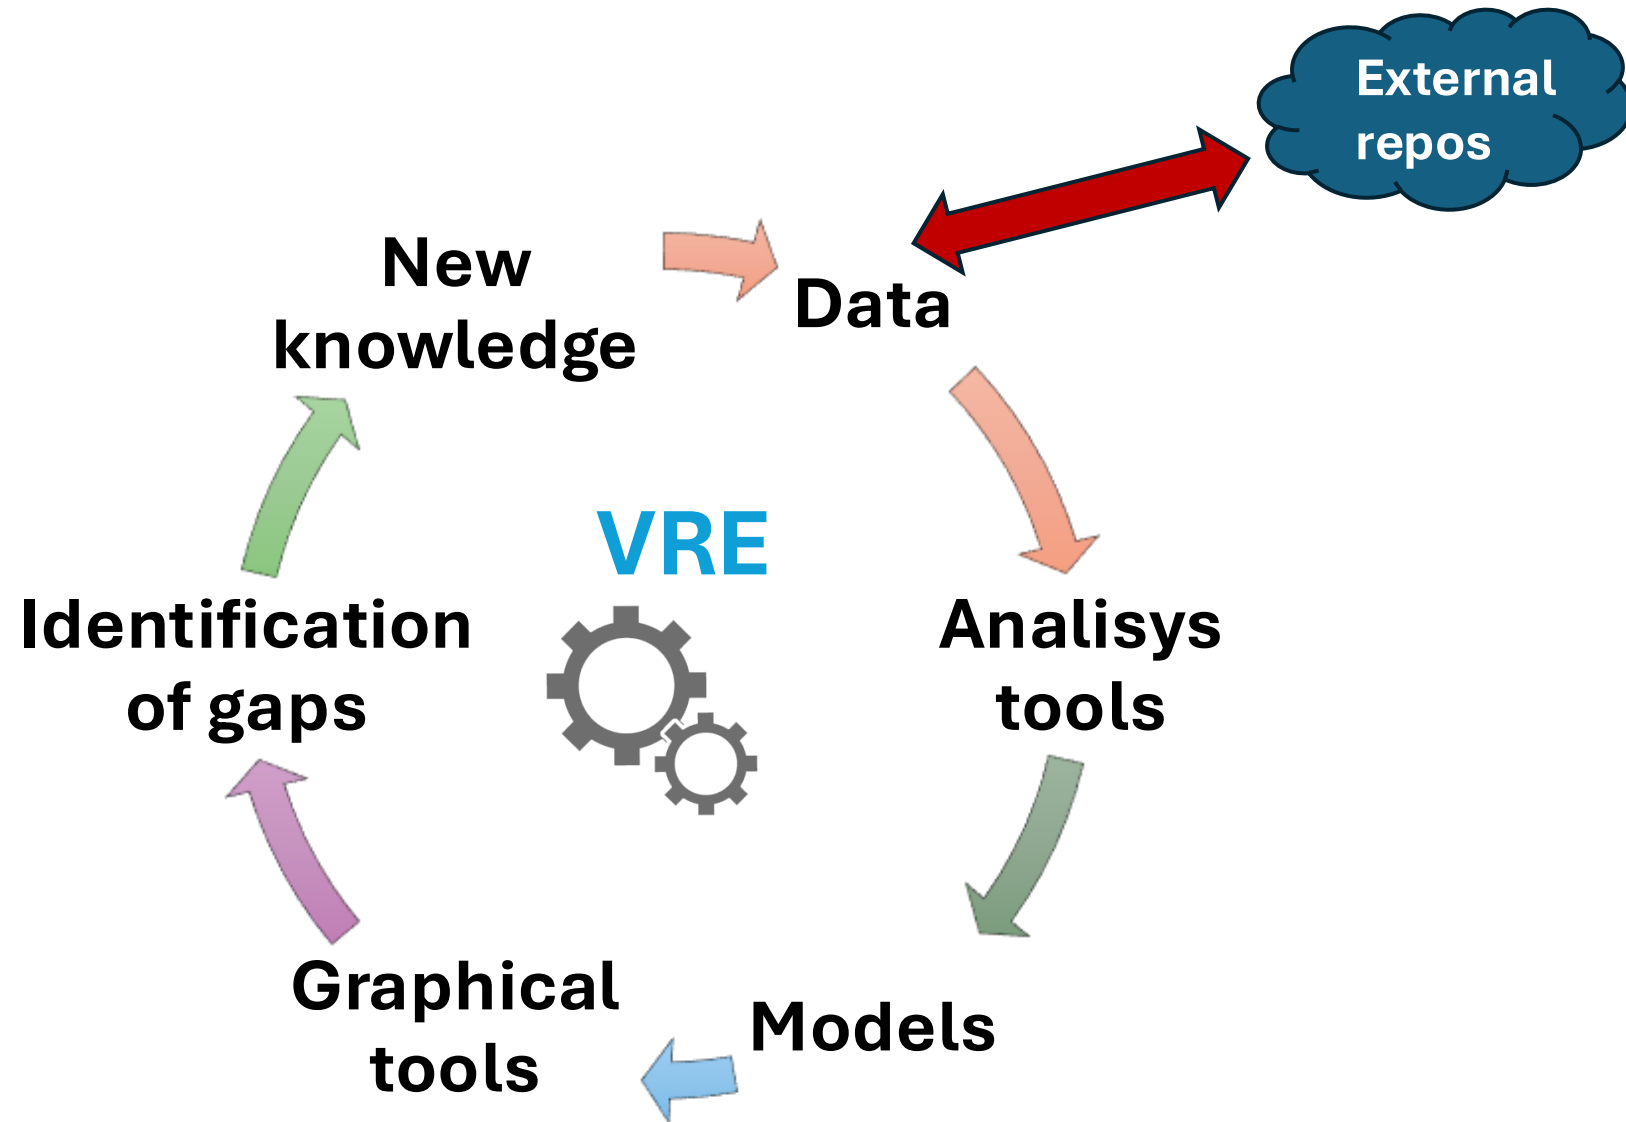

- Enables collaboration between researchers across countries;
- Researchers work together having shared access to the same facilities (data, instruments, computing, and communication).

Supports the creation of **Virtual Research Environments** to:

- Define sub-communities of practice;
- Allow temporary dedicated assignment of computational, storage, and data resources;
- Manage heterogeneous data and processes access policies;
- Support data and information sharing;
- Allow sharing competences and creating multi-disciplinary applications.

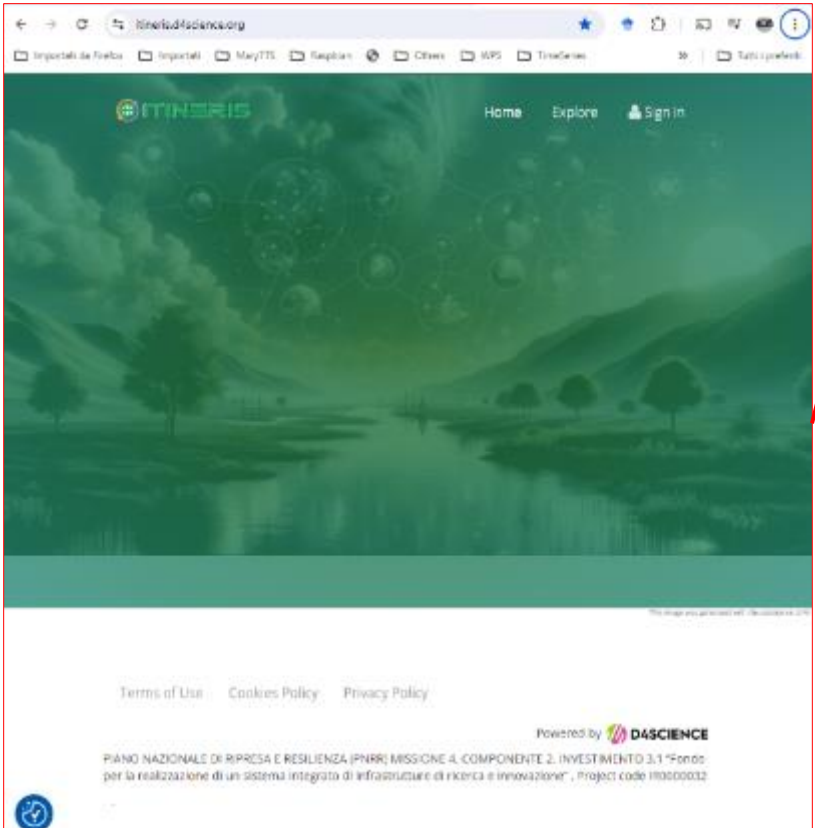

VRE and Data workflow

- Collaborations and shared solutions to **answer specific scientific and/or management questions** that require an ensemble of data, analysis tools, modelling solutions and graphical tools, in the spirit of the open science principles.
- Researchers can upload/download and share knowledge, contributing to the construction of the VRE
- **Users** can access to a simplified version of the VRE to tackle specific issues

The ITINERIS D4Science Gateway: itineris.d4science.org

- 1. A gateway to the D4S-based VREs
- 2. Allows to request access to VREs
- 3. Allows to upload files on the VREs and to the private users' workspace

The screenshot displays the user interface of the ITINERIS VRE Gateway. It includes a navigation bar with a mail icon, a welcome message, and a news feed. A sidebar on the left shows 'My Stats' and 'My Virtual Research' options. A central panel highlights 'ITINERIS VREs' with a grid of icons for various VREs like AERO VRE, CLIMA VRE, and others. A bottom panel shows a file explorer for a 'Statistica workspace' with a table of files.

The Critical Zone (CZ) VRE

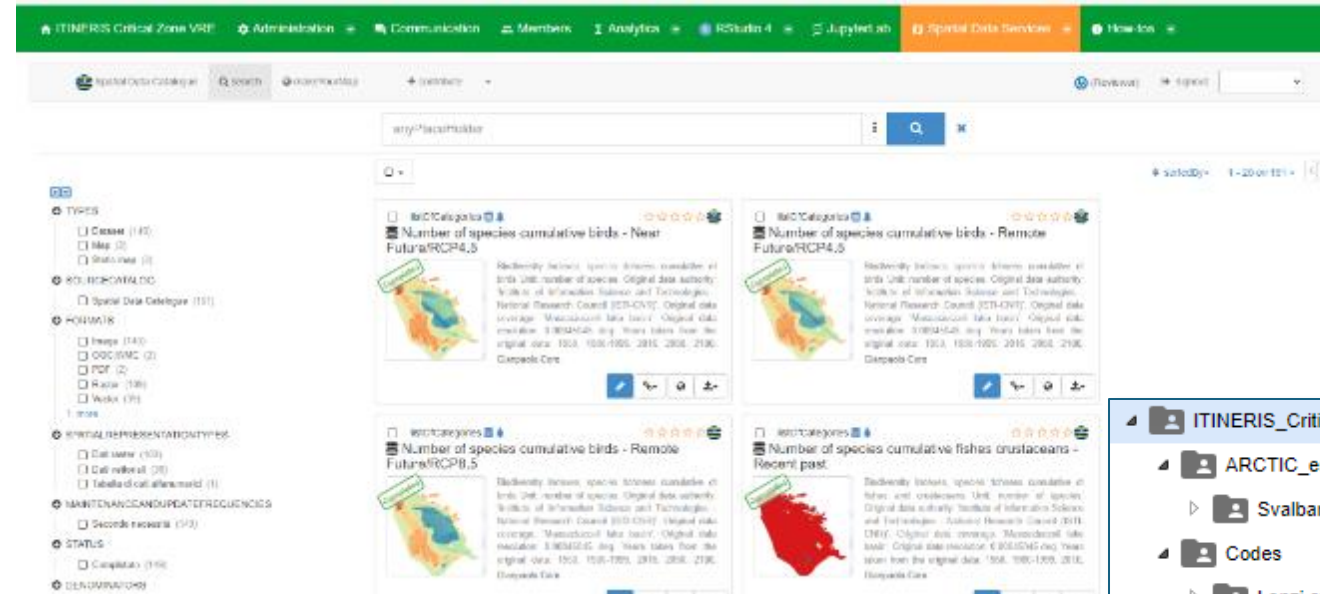

VRE manager: Pasquale Bove

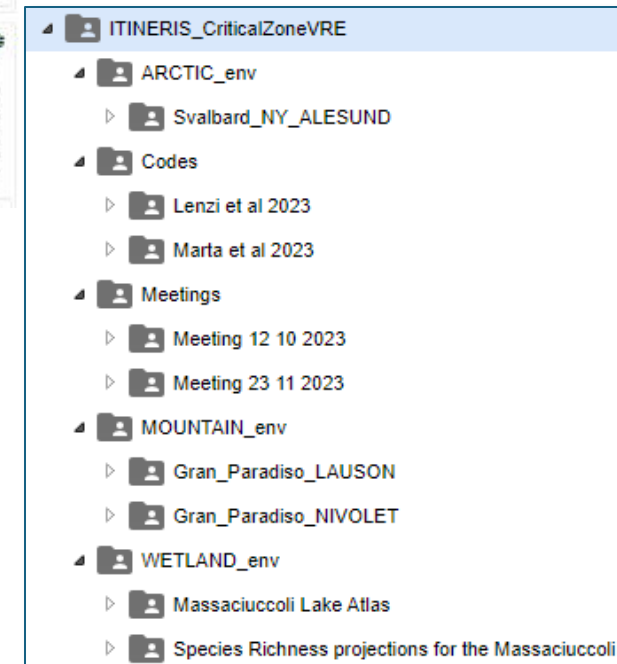

- 28 members
- 149 datasets published in the catalogue
- 11 processes and models available
- Social networking facilities

Machine and service types available for each user:

- RStudio: 4 Cores / 8G RAM (at Isti-Cnr)
- RStudio: 8 Cores / 32G RAM (at Isti-Cnr and on the Garr network)
- RStudio: 8 Cores / 64G RAM (on the Google Cloud connected to D4S)
- Linux/Python/Julia/Notebooks: 4 Cores / 16G RAM (at Isti-Cnr)

VRE Workspace organisation snapshot containing data available for all VRE members

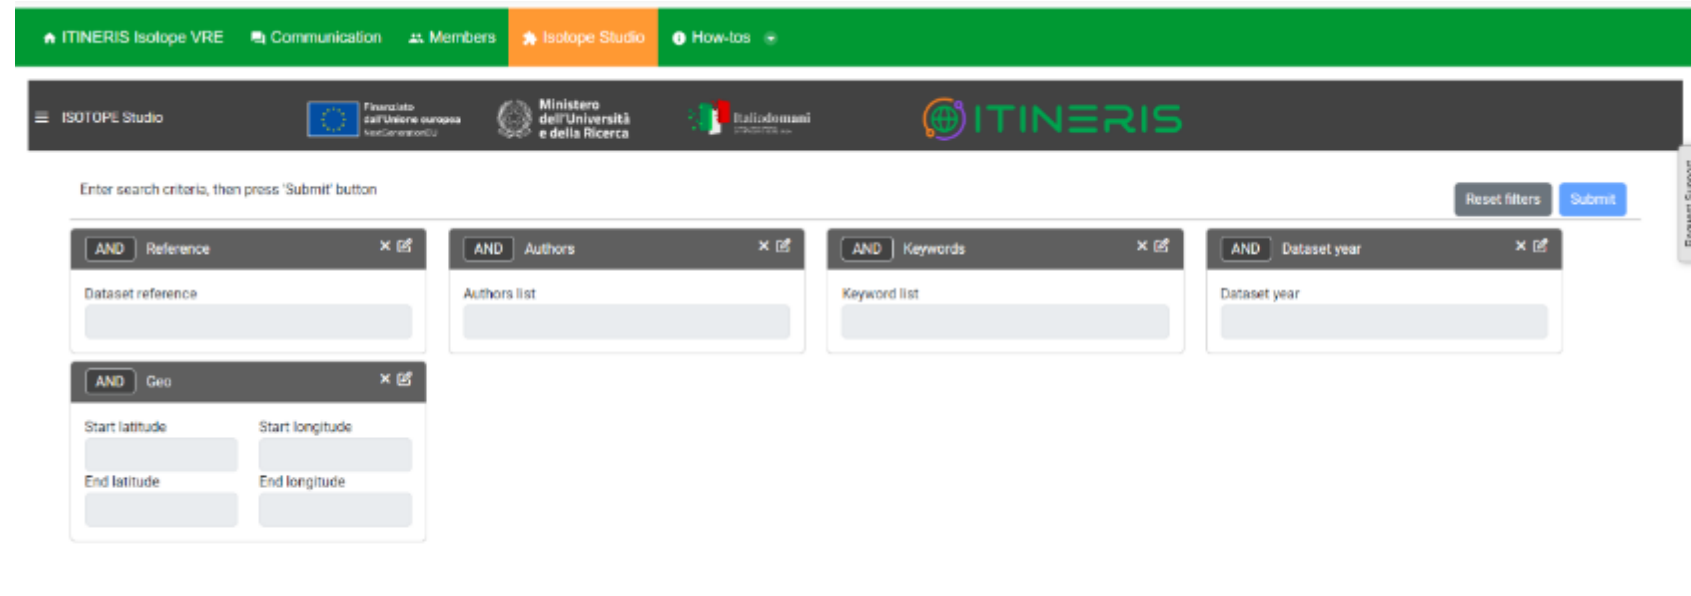

The Isotope VRE

VRE manager: Eugenio Trumpy

- 13 members
- Hosts the first-ever **full-suite for isotope data management, manipulation, harmonisation, and analysis**
- Uses machines with 8 Cores / 32G RAM hosted by Isti-Cnr and on the Garr network

VRE Workspace organisation snapshot contains the docker image of the applications that all VRE members can download and use

Conclusions

- Information, data, computing capabilities and services organised, shared and offered from a single easy to use platform
- Enable collaborations
- Find easily repositories
- Sharing research workflows
- FAIR metadata
- Sustainability?
