

EOSC Future User Group

The EOSC Future project is looking for 200+ science champions to help co-design and finetune EOSC services and products.

EOSC Future is an EU-funded project that will develop a European Open Science Cloud (EOSC) to strengthen European science. It will create a virtual environment where researchers can find, share and process interoperable data sets, publications, code and other research outputs. The EOSC environment will also include professional data, computing and storage services to facilitate scientific workflows.

The project looks to create a so-called 'system of systems' that will support European researchers in managing the entire lifecycle of data: from sharing, managing and exploiting their own data to discovering, re-using and recombining the data sets of others. To guarantee that this cluster of products and services responds to researchers' changing real-life needs, active user involvement is key.

That is why EOSC Future is looking for a diverse group of users and stakeholders to help co-create a trusted virtual data environment. Through the EOSC Future User Group, the project will assemble a team of "EOSC champions" from different scientific disciplines across the EU to help test and refine services and products. The User Group will rely on surveys, focus groups, or testbed sessions to validate project outputs.

Do you want to help shape the future of EOSC services while getting free access to select EOSC resources?
[Submit your application by 15 September to join the EOSC Future User Group.](#)
